INTRODUCTION.

THE remarkable collection of Egyptian Antiquities formed by the Rev. William MacGregor is unparalleled by any other private collection in England, Europe or America. Nearly twenty-five years ago the late Henry Wallis, in his book on *Egyptian Ceramic Art* —the sub-title of which is *The MacGregor Collection*—remarked that it then held a high position in the estimation of students of the art of the past. "It has acquired its reputation," he said, "both for its general excellence and for including among its treasures certain well-known objects of exceptional importance." At that time the predominating interest of the Bolehall Manor House Museum rested in its series of choice specimens of Egyptian Ceramic Art. "The examples in that Department," wrote Mr. Wallis, "permit of the taking a comprehensive survey of the progress of the art of the Egyptian potter from an early period up to that of its latest development such as is scarcely to be found elsewhere." Since the date of Mr. Wallis's publication many more important examples have been acquired by Mr. MacGregor, and among these is the beautiful blue glazed faience chalice which forms the subject of the frontispiece of this catalogue.

But if in 1898 the Bolehall Manor House Museum was famous for its collection of specimens of Ceramic Art, later additions have made it equally remarkable in other branches of Egyptian antiquities. Many important objects discovered at Nagada, Abydos, Reqaqnah, Beni Hasan and in the ruins of the Royal City of Meroë in the Sudan, have, since 1898, come into the possession of Mr. MacGregor, who for several years was a supporter of the Egyptian excavations carried out by Professor Garstang. All these additions have been carefully noted on the card catalogue of the collection made by Mr. MacGregor himself, and these have been used by Mr. Knight in drawing up the present catalogue.

The objects of the Pre-dynastic and Archaic periods are especially important. Many of these have been used by Monsieur Capart to illustrate his fascinating book on *Primitive Art in Egypt*. There is no Pre-dynastic figure comparable to the one in stone of a bearded man wearing what has been called the *Karnata*-sheath, and the series of ivory figurines of the same date is hardly less remarkable. To this period belong many of the mace-heads of curious form and numbers of stone vases. The ivory tablet of King Den of the First Dynasty, has engraved in line upon it a scene showing the Egyptian monarch smiting with his mace a Bedâwi chieftain—this is the earliest example of what afterwards

became the regular conventional way of representing the conquest of a foreign people by the Egyptians. The face of Khafra, exquisitely cut in crystalline limestone, is an important relic of the sovereign who was known to the Greeks as Khephren and whose tomb is the Second Pyramid at Gizeh. The small statuette of a negro represented seated on the ground, one knee raised and resting his head upon it, is believed to belong to the Heracleopolitan period.

The outstanding gem of the whole collection is, however, the obsidian head of a Twelfth Dynasty King; this is not only generally recognised as the finest known example of ancient Egyptian sculpture, but it is a masterpiece that has not been surpassed by any sculptor of any other country or age. Among the Artist's trial pieces are two or three of exceptional beauty, and the well-known panels of an ivory casket have for many years been recognised as the most exquisite specimens of Egyptian Art of the Saite period. Among the Jewellery are many noted pieces, including some choice examples from the Dahshur "find" of Monsieur J. de Morgan, and an ornament in gold, inscribed with the name of the Meroitic King Hormataleq, which was discovered by Mr. Garstang at Meroë. The collection of Cylinder Seals, Button Seals and Scarabs is a representative one, and includes the only known examples of the Wild Cattle Hunt Scarab of Amenhetep III: these latter were formerly in the Fraser Collection. The series of Beads is very large, and ranges in date from Pre-dynastic to Arab times. To the last group belong the two tiny ivory labels that were discovered in the Royal tomb at Nagada; one of these is for a string of 135 beads with the name of Menes' Queen on the obverse, the other is for a girdle that was composed of 1,400 beads, with the name of a princess of the family of Menes. No beads were found with these tiny labels; they were perhaps golden ones, and stolen from the tomb more than five thousand years ago.

455 WILD CATTLE-HUNT SCARAB OF AMENHETEP III. The text of this famous historical scarab, which measures $4\frac{5}{8}$ in. by $3\frac{1}{8}$ in., and of which only two examples are known (both in the present collection), has been published with full translation by Professor Newberry (*Scarabs*, *pp.* 174-176). His translation reads:

The second year under the Majesty of the living Horus (here follow the full titles of Amenhetep III and Queen Tyi), a wonderful thing happened to His Majesty. A messenger (*lit.* "one") came to tell his Majesty that there were wild cattle upon the desert of the district of Shetep (or Shetau). His Majesty thereupon floated down the river in the Royal dahabiyeh, "Kha em maat" (*i.e.* "Shining in Truth") at the time of evening, and (after) having had a good journey arrived in safety at the district of Shetep (or Shetau) at the time of morning. His Majesty mounted upon a horse and his whole army followed him. The nobles and the Ankhu-officers of the entire army were marshalled and the children of the quarter (district) were ordered to keep watch upon these wild cattle. His Majesty thereupon ordered that they (*lit.* "one") should surround this wild cattle with a net and a dyke, and His Majesty then ordered that these wild cattle should be counted in their entirety, and the number of them amounted to wild cattle, 190. The number of wild cattle which His Majesty brought in (his own)

hunting in this day was 56. His Majesty rested four days in order to give spirit (*lit.* "fire") to his horses; then His Majesty mounted again upon a horse and the number of these wild cattle which were brought to him in hunting was wild cattle 20 + 20 (*i.e.* "40"), making the total number of wild cattle captured 96.

"*Top Piece.* From one end of the Casket, with a circular hole drilled near right-hand end on top, and five rectangular socket-holes (three $\frac{3}{4}$ in. wide, two $1\frac{1}{16}$ in. wide) cut in the under side; between two lines in relief are inscriptions reading from the centre: (*a*) 'Mayest thou do the desire of thy heart....' (*b*) 'Mayest thou do what thou desirest, tire not thereof'; length $7\frac{1}{2}$ in., height $1\frac{1}{8}$ in., breadth $\frac{5}{16}$ in.

Narrow Panels. One perfect, the other a fragment; ornamentation, a papyrus flower between papyrus buds; height without tenons 6 in., breadth 1 in. at top widening to $1\frac{1}{4}$ in. at $3\frac{1}{2}$ in. from the top; the tenons are $\frac{1}{4}$ in. at top and bottom, and fit into the smaller sockets of the top piece, and probably belonged to the end of the casket; on the back of the lower tenon is incised the hieroglyph *maa*.

Broad Panels. Three panels nearly complete, and lower part of a fourth, each with a figure of an official bearing offerings, and in the background papyrus reeds; these officials are all similarly clad, they wear short curled wigs with lotus flowers secured to fillets over forehead; the first two have a band over the left shoulder tied in a bow at the side under the right arm; the third has two bands crossed over the chest; they all wear plain short loin-cloths; the first man holds with his right hand a basket of fruit above his right shoulder, and a duck grasped by the neck in his left hand; behind him is a short-horned calf wearing a collar, from which hangs a lotus flower; the second man balances with his left hand a basket of figs on his head, from his left arm hangs a bunch of lotus flowers and buds with long stems; in his right hand is a rush basket, in front walks a stork; the third man leads another calf by the cord tied around its neck, and with his right hand balances a basket of fruit upon his head, from the right arm hangs by a cord a bag of figs; only the lower part of the fourth panel is preserved; height without tenons 6 in., breadth 2 in. at the top; the second panel is straight on the left side, but on the right projects $\frac{3}{8}$ in. at $2\frac{1}{2}$ in. from the base; the third panel has $\frac{1}{8}$ in. projections at either side, $2\frac{1}{2}$ in. from the base; the tenons measure $\frac{1}{4}$ in. top and bottom, and on their backs have hieroglyphic signs as guides to the fitter.

Were it not for certain points in the writing of the inscription on the top piece, there would be no question at all as to ascribing the casket to the Old Kingdom, or more precisely to the 4th or 5th Dynasty. But as Dr. A. H. Gardiner points out, the inscription cannot be earlier than the Saite, and as the inscription is certainly of the same date as the panel reliefs, it is to the Saite period that the casket may be assigned."

(*Two panels figured by J. Capart, L'Art Egyptien*, 1911, *pl.* CXCI, *and there ascribed to the Saite* (?) *period*) [Pl. XXI]

HEAD OF AMENEMMES III. IN OBSIDIAN.

12th Dynasty.

10,000

Harris
A.S

Contrary to the impression conveyed by the reproduction, this marvellous work is not life-size, but $4\frac{7}{8}$ in. from the top of the head to the chin. The damage it has sustained is slight, but lessens what seems to have been a characteristic of the 12th Dynasty period, namely: the size of the large ears placed high up on the head. This admirable relic of one of the finest epochs of Egyptian Art gains additional interest from the fact that the king is represented as an older man than in all other monuments, save that from the Karnak *cache* now in Cairo. The expression is more pensive, more dreamy than in most of his portraits; and there is a striking resemblance to his father Sesostris III. The likeness of the profile to that of a head in schist, preserved in Berlin, is also remarkable, though in the present example the king has perhaps been pourtrayed when more advanced in years. This superb piece of sculpture conveys a striking impression of sedate and noble calm, and the greatness of the work makes itself felt more and more as one studies it. It was the supreme treasure in last year's Exhibition of the Burlington Fine Arts Club, and is thought by competent judges to be the finest expression of Egyptian statuary art in the world. (*See the article by Mr. Charles Ricketts in Journal of Egyptian Archaeology, vol. IV*, 1917, *to which we are indebted for whatever is of critical value in the above remarks*).
